# Cyber Security

## Cyber Security

**Optisource** is a reliable UK-based company that specializes in cybersecurity services. We help both the big and small companies in the identification of security breaches and provide outclass solutions to prevent any potential harm. Our skilled team, incorporation of advanced technology and provision of customized security solutions make us a reliable choice for protecting your network.

### Eliminating Cyber Security Threat

With time, cybercriminals are becoming more skilled at what they do, and it has become more daunting to prevent security breaches. Special attention to detail and timely threat detection is essential for preventing a malicious attack, and that's what we are here for.

### Identification and Response

Not only we can identify the potential harms but can also design personalized solutions to make your networks unbreachable. It is critically important to know when your company is attacked by cybercriminals so that timely help can be provided to avoid any significant reputational and financial damage.

### Effective Penetration Testing

Some tests are needed to determine your network strength and ability to withstand the latest cyber-attacks. For instance, red teaming and penetration testing can be incredibly helpful in this regard.

### Effective Management and Monitoring and Cloud Security

No matter how big or small your business is, if you are using cloud storage for your data, you must ensure that it is well protected for avoiding any harm. We provide constant monitoring and effective management services for keeping your valuable assets safe and secure.

### Finding and Reporting Security Threats

To reduce the possibility of malicious attacks and minimize the intensity of their harm, it is essential to have the ability to determine security breaches, and that's what we can do for you. Along with finding the problem, we can also provide the best solutions possible for responding to those breaches effectively.

### Anti-Malware Protection

Many different forms of malware exist and pose serious harm to your company's network security. It is fundamentally vital to have the required technology and skills through which the threats can be detected timely and tackled appropriately. We possess everything needed to identify breaches and fix the problems before they can result in any significant damage.

## Managing BEC Attacks and Phishing

You might have already heard about the severity of phishing attacks. There are massively growing in intensity and impact, and if you want to save your business from some severe harm, it is vital to take preventive measures for protecting your networks from huge potential damages.

## Defending from Insider Threats

The insider threats are among the most severe cyber threats that most of the companies experience. If you want to save yours from any critical damage, make sure you invest in a credible cybersecurity service provider.

## GDPR

For supporting the General Data Protection Regulation, we help companies to protect their personal and critical data by determining potential weak points and breaches and offering appropriate solutions for threat remediation.
